

806. Domino and Tromino Tiling

Difficulty : Medium

<https://leetcode.com/problems/domino-and-tromino-tiling>

You have two types of tiles: a 2×1 domino shape and a tromino shape. You may rotate these shapes.

Domino tile

Tromino tile

Given an integer n , return *the number of ways to tile an $2 \times n$ board*. Since the answer may be very large, return it **modulo** $10^9 + 7$.

In a tiling, every square must be covered by a tile. Two tilings are different if and only if there are two 4-directionally adjacent cells on the board such that exactly one of the tilings has both squares occupied by a tile.

Example 1:

Input: $n = 3$

Output: 5

Explanation: The five different ways are shown above.

Example 2:

Input: $n = 1$

Output: 1

Constraints:

- $1 \leq n \leq 1000$
