

1313. Count Ways to Build Rooms in an Ant Colony

Difficulty : Hard

<https://leetcode.com/problems/count-ways-to-build-rooms-in-an-ant-colony>

You are an ant tasked with adding n new rooms numbered 0 to $n-1$ to your colony. You are given the expansion plan as a **0-indexed** integer array of length n , `prevRoom`, where `prevRoom[i]` indicates that you must build room `prevRoom[i]` before building room i , and these two rooms must be connected **directly**. Room 0 is already built, so `prevRoom[0] = -1`. The expansion plan is given such that once all the rooms are built, every room will be reachable from room 0 .

You can only build **one room** at a time, and you can travel freely between rooms you have **already built** only if they are **connected**. You can choose to build **any room** as long as its **previous room** is already built.

Return the **number of different orders** you can build all the rooms in. Since the answer may be large, return it **modulo** $10^9 + 7$.

Example 1:

Input: `prevRoom = [-1,0,1]`

Output: 1

Explanation: There is only one way to build the additional rooms: $0 \rightarrow 1 \rightarrow 2$

Example 2:

Input: `prevRoom = [-1,0,0,1,2]`

Output: 6

Explanation:

The 6 ways are:

$0 \rightarrow 1 \rightarrow 3 \rightarrow 2 \rightarrow 4$

$0 \rightarrow 2 \rightarrow 4 \rightarrow 1 \rightarrow 3$

$0 \rightarrow 1 \rightarrow 2 \rightarrow 3 \rightarrow 4$

$0 \rightarrow 1 \rightarrow 2 \rightarrow 4 \rightarrow 3$

$0 \rightarrow 2 \rightarrow 1 \rightarrow 3 \rightarrow 4$

$0 \rightarrow 2 \rightarrow 1 \rightarrow 4 \rightarrow 3$

Constraints:

- $n == \text{prevRoom.length}$
- $2 \leq n \leq 10^5$
- `prevRoom[0] == -1`
- $0 \leq \text{prevRoom}[i] < n$ for all $1 \leq i < n$

- Every room is reachable from room \emptyset once all the rooms are built.
