

# 1725. Number of Sets of K Non-Overlapping Line Segments

## Difficulty : Medium

<https://leetcode.com/problems/number-of-sets-of-k-non-overlapping-line-segments>

Given  $n$  points on a 1-D plane, where the  $i^{\text{th}}$  point (from 0 to  $n-1$ ) is at  $x = i$ , find the number of ways we can draw **exactly**  $k$  **non-overlapping** line segments such that each segment covers two or more points. The endpoints of each segment must have **integral coordinates**. The  $k$  line segments **do not** have to cover all  $n$  points, and they are **allowed** to share endpoints.

Return *the number of ways we can draw  $k$  non-overlapping line segments*. Since this number can be huge, return it **modulo**  $10^9 + 7$ .

### Example 1:

**Input:**  $n = 4$ ,  $k = 2$

**Output:** 5

**Explanation:** The two line segments are shown in red and blue.

The image above shows the 5 different ways  $\{(0,2),(2,3)\}$ ,  $\{(0,1),(1,3)\}$ ,  $\{(0,1),(2,3)\}$ ,  $\{(1,2),(2,3)\}$ ,  $\{(0,1),(1,2)\}$ .

### Example 2:

**Input:**  $n = 3$ ,  $k = 1$

**Output:** 3

**Explanation:** The 3 ways are  $\{(0,1)\}$ ,  $\{(0,2)\}$ ,  $\{(1,2)\}$ .

### Example 3:

**Input:**  $n = 30$ ,  $k = 7$

**Output:** 796297179

**Explanation:** The total number of possible ways to draw 7 line segments is 3796297200. Taking this number modulo  $10^9 + 7$  gives us 796297179.

### Constraints:

- $2 \leq n \leq 1000$
- $1 \leq k \leq n-1$
